### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Status of Application/Amendment/Claims***

Applicant's response filed 29 June 2005 has been considered. Rejections and/or objections not reiterated from the previous office action mailed 25 January 2005 are hereby withdrawn. The following rejections and/or objections are either newly applied or are reiterated and are the only rejections and/or objections presently applied to the instant application.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### ***Claim Rejections - 35 USC § 102***

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Audran *et al.*, (J. Immun. Meth. 1995, 188:147-154).

Claim 1 is drawn to a method of decreasing CD63 facilitated human immunodeficiency virus entry into macrophage cells susceptible to infection with a strain of HIV, the method comprising exposing the cells to an anti-CD63 antibody in an amount effective to bind the anti-CD63 antibody to CD63 present in the cells, whereby the CD63 facilitated human immunodeficiency virus entry into the cells is decreased.

Audran teaches administration of an anti-CD63 antibody to human macrophage cells. While Audran *et al.* is silent as to the effect that such antibody administration would have on the ability of HIV to enter cells, the method steps of Audran *et al.* are considered to be identical to those of the instant claim, and as such, the effect of preventing HIV entry is considered to be an inherent feature of administration of an anti-CD63 antibody, particularly since the instant

Art Unit: 1635

specification teaches that CD63 is utilized by HIV during entry. Accordingly, because Audran *et al.* is considered to teach the instant method steps, Audran *et al.* anticipates the instantly claimed invention.

### ***Conclusion***
